

Year 3 - Summer Two 2026

As **Readers** we will:

Be finding out about the Windrush generation through the book *Coming to England*, an informative true text about one families experience of their journey both before and after they travel. We will deepen our understanding through engaging discussions and activities.

As **Writers** we will:

Take inspiration from *Coming to England* to write informal letters building on our ability to join ideas together using a range of conjunctions. Later, we will put our Science knowledge to the test to write an explanatory text.

As **Mathematicians** we will:

Become measurement masters! We'll explore different units of measure, including mass, capacity, and statistics, using hands-on activities and problem-solving challenges to bring maths to life.

As **Designers** we will:

we will explore how climate affects food growth, compare seasonal ingredients, create a healthy recipe using and cook (and taste) our very own seasonal tarts.

As **Scientists** we will:

Explore the inner workings of bones and muscles and how they keep both humans and animals moving! The highlight of our investigation will be dissecting owl pellets—an extraordinary opportunity to examine what these fascinating creatures eat and even reconstruct a skeleton from the bones we find!

As **Geographers** we will:

Delve into the world of settlements—discovering how and why people choose to live in certain places. By exploring maps, landmarks,

Growing together

Opportunities for all

Learning for life

Daring to dream
